1. STUDENT DETAILS

Name: Nilanjan Das

Roll Number: 25010101331

Batch: Core Batch 04

Course: B.Tech Computer Science and Engineering

University: UPES

Date: 10 September 2026

2. PROJECT TITLE

Personal Portfolio Website

3. OBJECTIVE

The objective of this project is to create a responsive personal portfolio website using HTML, CSS and JavaScript. The website showcases my personal information, technical skills, projects and contact details.

4. TEMPLATE / STARTING POINT

The portfolio website was created from scratch using HTML, CSS and JavaScript. AI assistance was used for generating the initial structure, improving the design and simplifying parts of the code.

5. AI TOOLS USED

ChatGPT

- Modified the initial HTML structure
- Made the website responsive
- Improved the portfolio design
- Troubleshoot and modified the code

Claude

- Created attractive design ideas for the CSS file
- Provided portfolio design references
- Helped make the project more error-free

6. PROMPTS USED

1. "Help me with HTML, CSS and JS file."
2. "Make it attractive set a nice background."
3. "In this CSS file set the background with some tech and programming theme."
4. "Drowsiness project and make a place for it."

7. METHOD / APPROACH

Step 1 Created the basic HTML structure of the portfolio.

Step 2 Added Home, About Me, Skills, Projects and Contact sections.

Step 3 Created CSS styling for the website.

Step 4 Added a dark technology-themed background and responsive design.

Step 5 Used JavaScript for the mobile navigation menu and contact form.

Step 6 Added my Calculator, To-Do List, Drowsiness Detection and Personal Portfolio projects.

Step 7 Uploaded the project files to GitHub.

Step 8 Hosted the portfolio website using GitHub Pages.

Step 9 Added a Download Documentation button to the footer.

8. TECHNOLOGIES USED

- HTML
- CSS
- JavaScript
- Git
- GitHub
- GitHub Pages

9. PROJECTS INCLUDED

No.	Project	Technologies
01	Calculator	HTML, CSS, JavaScript
02	To-Do List	HTML, CSS, JavaScript
03	Drowsiness Detection System	HTML, CSS, JavaScript
04	Personal Portfolio Website	HTML, CSS, JavaScript

11. CONCLUSION

This project helped me understand how HTML, CSS and JavaScript work together to create a responsive website. I also learned how to upload projects to GitHub and host a website using GitHub Pages.
